## 554.

## AN ELLIPTIC-TRANSCENDENT IDENTITY.

[From the Messenger of Mathematics, vol. II. (1873), p. 179.]

THE following is a singular identity:

$$
\begin{aligned}
& (1+q)\left(1+q^{3}\right)\left(1+q^{5}\right)\left(1+q^{7}\right)^{2}\left(1+q^{9}\right) \ldots \\
- & (1-q)\left(1-q^{3}\right)\left(1-q^{5}\right)\left(1-q^{7}\right)^{2}\left(1-q^{9}\right) \ldots \\
= & 2 q\left(1+q^{2}\right)\left(1+q^{4}\right)\left(1+q^{6}\right)\left(1+q^{8}\right)\left(1+q^{10}\right)\left(1+q^{12}\right)\left(1+q^{14}\right)^{2}\left(1+q^{16}\right) \ldots,
\end{aligned}
$$

where in each of the three terms every factor has the exponent 1 or 2 according as the exponent of $q$ is not, or is, divisible by 7 .
