# GESAPU

## Geoinformation technologies, spatio-temporal approaches, and full carbon account for improving accuracy of GHG inventories

### Deliverable 3.1. A detailed map of GHG related activity data in Poland, ready for use in Work Package 1

*Rostyslav Bun, Myroslava Lesiv (Editors),  
Mykola Gusti, Khrystyna Boychuk, Petro Topylko, Olha Danylo, Olena Yaremhyshyn,  
Nadiya Charkovska, Oleksandr Stryamets, Petro Boychuk*  
Lviv Polytechnic National University, Ukraine;

*Zbigniew Nahorski, Joanna Horabik, Jolanta Jarnicka,*  
Systems Research Institute, Polish Academy of Sciences, Poland

### Delivery Date: M18

Project Duration 24 June 2010 – 23 June 2014 (48 Months)  
Coordinator Systems Research Institute of the Polish Academy of Sciences (SRI)  
Work package leader Systems Research Institute of the Polish Academy of Sciences (SRI)

This project is supported by funding by the European Commission: FP7-PEOPLE-2009-IRSES, Project n° 247645.

**Project:** #247645. Call: FP7-PEOPLE-2009-IRSES, Marie Curie Actions—International Research Staff Exchange Scheme (IRSES).

**Work package 3.** Improving accuracy of inventories by means of spatio-temporal statistical methods

**Deliverable 3.1.** A detailed map of GHG related activity data in Poland, ready for use in Work Package 1

## Content

1. Maps of population density and GDP density for Poland
2. Maps of activity data for Energy sector: stationary sources
3. Maps of activity data for Energy sector: mobile sources
4. Maps of activity data for Industry and Agriculture

## List of figures

**Figure 1.1.** Relative change of population in Poland, 2000-2009

**Figure 1.2.** Population density of Poland, 2009

**Figure 1.3.** GDP per capita in Poland, 2009 (PLN/person, current prices)

**Figure 1.4.** GDP in Poland, 2009 (PLN/km<sup>2</sup>, current prices)

**Figure 1.5.** Relative GVA generated in industry (sectors B,C,D,E)

**Figure 1.6.** GDP generated in agriculture, forestry and fishing in Poland (Section A) (PLN/km<sup>2</sup>, current prices)

**Figure 1.7.** GDP generated in industry in Poland (Sections B,C,D,E) (PLN/km<sup>2</sup>, current prices)

**Figure 1.8.** GDP generated in industry excluding manufacturing in Poland, (Sections B,D,E) (PLN/km<sup>2</sup>, current prices)

**Figure 1.9.** GDP generated in manufacturing in Poland, (Section C) (PLN/km<sup>2</sup>, current prices)

**Figure 1.10.** GDP generated in construction in Poland (Section F) (PLN/km<sup>2</sup>, current prices)

**Figure 2.1.** Coal and natural gas consumption for Electricity and Heat Production in voivodeships

**Figure 2.2.** Localization of heat/power plants

**Figure 2.3.** Population using gas system (% of total population, Poland)

**Figure 2.4.** Dwelling fitted with central heating (% of total living area, Poland)

**Figure 2.5.** Disaggregated data on coal consumption in residential sector (kg/km<sup>2</sup>, Poland)

**Figure 2.6.** Disaggregated data on liquefied gas consumption in residential sector (10<sup>3</sup> ton/km<sup>2</sup>, Poland)

**Figure 2.7.** Disaggregated data on natural gas consumption in residential sector (TJ/km<sup>2</sup>, Poland)

**Figure 3.1.** Gasoline consumption by passenger cars (municipalities of Poland, 10<sup>3</sup> tons)

- Figure 3.2.** Diesel consumption by passenger cars (municipalities of Poland,  $10^3$  tons)
- Figure 3.3.** LPG consumption by passenger cars (municipalities of Poland,  $10^3$  tons)
- Figure 3.4.** Gasoline consumption by buses (municipalities of Poland,  $10^3$  tons)
- Figure 3.5.** Diesel consumption by buses (municipalities of Poland,  $10^3$  tons)
- Figure 3.6.** LPG consumption by buses (municipalities of Poland,  $10^3$  tons)
- Figure 3.7.** Gasoline consumption by lorries (municipalities of Poland,  $10^3$  tons)
- Figure 3.8.** Diesel consumption by lorries (municipalities of Poland,  $10^3$  tons)
- Figure 3.9.** Gasoline consumption by special vehicles and tractors (municipalities of Poland,  $10^3$  tons)
- Figure 3.10.** Diesel consumption by special vehicles and tractors (municipalities of Poland,  $10^3$  tons)
- Figure 3.11.** Automobile roads' capacity (Poland)
- Figure 3.12.** Spatial distribution of population (municipalities of Poland)
- Figure 4.1.** Cement plants' capacities (Gg)
- Figure 4.2.** Glass plants' capacities (Gg)
- Figure 4.3.** Fragment of geodatabase with data on population of livestock owned by individual farms in Poland
- Figure 4.4.** Population of cattle (dairy) owned by individual farms in Poland
- Figure 4.5.** Population of cattle (non-dairy) owned by individual farms of Poland
- Figure 4.6.** Population of swine owned by individual farms of Poland
- Figure 4.7.** Population of poultry owned by individual farms in Poland
- Figure 4.8.** Population of horses owned by individual farms in Poland
- Figure 4.9.** Population of sheep owned by individual farms in Poland
- Figure 4.10.** Population of goats owned by individual farms in Poland
- Figure 4.11.** Evergreen coniferous forest of Poland
- Figure 4.12.** Broadleaf forest of Poland
- Figure 4.13.** Mixed forest of Poland

## List of tables

- Table 2.1.** Fossil fuel used by power/heat stations of Polish voivodeships
- Table 2.2.** Information on power / heat stations
- Table 2.3.** Consumption of fossil fuels in residential sector of Poland
- Table 3.1.** Road motor vehicles by age groups (in %)
- Table 3.2.** Fuel consumption for transport needs
- Table 3.3.** Fuel consumption by transport categories
- Table 3.4.** Road motor vehicles in total
- Table 3.5.** Vehicle miles travelled

**Table 3.6.** Road motor vehicles by fuel type in total

**Table 3.7.** Fuel use for transport needs and in agriculture

**Table 3.8.** Road vehicles and tractors, in total

**Table 4.1.** Statistical data on Cement Industry in January, 2010

**Table 4.2.** Statistical data on Cement Industry in February, 2010

**Table 4.3.** Statistical data on Cement Industry in March, 2010

**Table 4.4.** Statistical data on Cement Industry in April, 2010

**Table 4.5.** Statistical data on Cement Industry in May, 2010

**Table 4.6.** Statistical data on Cement Industry in June, 2010

**Table 4.7.** Statistical data on Cement Industry in July, 2010

**Table 4.8.** Statistical data on Cement Industry in August, 2010

**Table 4.9.** Statistical data on Cement Industry in September, 2010

**Table 4.10.** Statistical data on Cement Industry in October, 2010

**Table 4.11.** Statistical data on Cement Industry in November, 2010

**Table 4.12.** Statistical data on Cement Industry in December, 2010

**Table 4.13.** Livestock population of Polish voivodeships, 2010

## 2. Maps of activity data for Energy sector: stationary sources

The process of spatial distributed analysis consists of the following steps:

- 1) collecting activity data and forming input databases (for example, Excel, Oracle or Access);
- 2) forming the digital maps of investigated areas with spatially resolved activity data.

Energy sector is divided into several categories. Each category requires different activity data. The maps presented below are related to activity data for each category used for spatial inventory.

### **Electricity and Heat production**

Activity data:

- (1) Fossil fuel consumption at voivodeship level (Table 2.1., Figure 2.1.)
- (2) Information on heat/power plants (Table 2.2., Figure 2.2);

**Table 2.1. Fossil fuel used by power/heat stations of Polish voivodeships (GUS, 2010)**

Voivodeships	Number of heat/power plants	Fossil fuel burned		
		coal, 10 <sup>3</sup> tones	natural gas, TJ	brown coal, 10 <sup>3</sup> tones
Dolnośląskie	3	997.0	463.0	—

-------	----	---------	---------	---------

Heat and power plants are the largest emission point sources. The heat and power supply involves power plants, public and autoproducing combined heat and power plants, as well as public and municipal heat plants. Public heat and power plants or combined heat and power plants generate energy and heat for residential consumers. Autoproducing entities generate electricity and heat wholly or partially for their own use. *Figure 2.1.* and *Figure 2.2.* show the map with localised heat/power plants: (1) *Figure 2.1.* includes the fossil fuel consumption for heat/energy production in voivodeships from *Table 2.1.*; (2) *Figure 2.2.* includes the information on heat/power plants from *Table 2.2.*

**Figure 2.1.** Coal and natural gas consumption for Electricity and Heat Production in voivodeships for the year 2010, TJ

### Residential sector

Residential sector is one of the most considerable sectors for the reduction of GHG emissions . These emissions are caused by burning coal as well as natural and liquefied gas.

In order to perform spatial inventory of GHG emissions in the residential sector the available information from official national statistical databases and regional statistical reports for corresponding year was collected. The statistical information about fossil fuel consumption was only available at the level of Polish voivodeships (*Table 2.3.*; GUS, 2011). Country-specific emission factors and calorific values have been derived from national fuel characteristics (IPCC, 2006; KOBIZE, 2012; CLC 2006, 2011).

The amount of the fossil fuel burned in the residential sector depends on such parameters as population density, human needs (cooking, space and water heating), and access to different energy sources (*Figure 2.3-2.7.*).

As input data a specialized file (in Excel format) was created. It consists of several sheets: sheet 1 contains data on the fossil fuels consumption for the voivodeships; sheet 2 contains information about dwelling fitted with central heating and persons using gas system ( % of total population) for

urban and rural communes; sheet 3 contains emission factors by source category and fuel used; sheet 4 – remarks and references.

The georeferenced input database consists of digital maps with information on geographical borders of Polish voivodeships, districts, and municipalities (area objects), as well as the CORINE Land Cover (CLC 2006, 2011) map (raster data) and map of settlements (point objects).

<b>Total</b>		<b>9000</b>	<b>134822</b>	<b>441</b>

**Figure 2.3. People using gas system (% of total population, Poland, 2009)**

**Figure 2.4.** Dwelling fitted with central heating (% of total living area, Poland, 2009)

The statistical data on fossil fuel consumption in the residential sector were disaggregated to the level of municipalities. The calculations required were conducted using the following formula:

$$M_i^\delta = M_i^W \times \frac{H_j^\delta \cdot Q(\delta)}{\sum_{p \in W} Q(p) \cdot H_j^p}$$

where  $M_i^W$  is an amount of fuel  $i$  burned in voivodeship  $W$ ,  $M_i^\delta$  is an amount of fuel  $i$  burned in commune  $\delta$ ,  $Q(s)$  -- a population of commune  $\delta$ , and  $H_j^\delta$  -- an indicator that defines percentage of total population using gas system for natural gas, percentage of total population that is not using gas system for liquefied gas, and percentage of total living area of dwelling not fitted with central heating for coal ( $j$  is a type of fossil fuel, i.e. coal, natural or liquefied gas).
