PRAEFATIO.

Collectio haec Tabularum trigonometricarum et logarithmicarum, tironibus destinata, cuius nunc noua editio exhibetur, nondum diligentiam editorum experta est eam, quae maioribus collectionibus contigit. Quis enim SHERWINI, SCHULZII et VEGAE, ut alios taceam, merita ignorat? Editiones enim posteriores, in primis ea, quae anno huius seculi septuagesimo quinto prodiit, mendis scatent,

quibus vt noua haec editio purgaretur, omnem
dedi operam. Nam cum paucissimi rerum
mathematicarum cultores ab re familiari ita sint
parati, vt multos in eiusmodi libros impendere
possint sumptus, facile me moueri passus sum
ad has tabulas, non magno parabiles, omni
diligentia, quae quidem a me praeclarri potuit,
edendas. Quomodo vero in hoc labore ver-
satus sim, breuiter exponam.

Ac primo quidem non tantum addendo,
sed etiam demendo commodis tironum et em-
torum huius editionis consulere studui. Ta-
bulae scilicet Logarithmorum Sinuum et Tan-
gentium pro singulis minutis primis Quadran-
tis adiunxi Logarithmos Sinuum et Tangen-
tium pro singulis minutis secundis primi Gra-

dus,

dus, quoniam in computationibus astronomi-
cis saepe quaestio est de angulis minoribus,
quam quidem in canone vulgari continentur.
Cosinus autem et Cotangentes non addidi, quo-
niam eorum inuentio non magnam habet diffi-
cultatem, vt mox docebitur. Denique non
alienum duxi, etiam Tabulas numerorum qua-
dratorum et cubicorum, atque radicum nu-
merorum ab vnitate ad 1000 crescentium ad-
iungere, nec arbitror fore, qui hoc addi-
tamentum pro superfluo habere possint. Ne
autem moles et pretium libri nimium auge-
retur, omisi omnia, quae in superioribus edi-
tionibus de resolutione triangulorum rectili-
neorum et sphaericorum, nec non de quaestio-
nibus astronomicis traduntur, retento tantum

primo

primo capite de harum tabularum vſu. Namque ii, qui Trigonometriae et Astronomiae elementa iam cognita habent atque perspecta, his paeceptis facile carere possunt; illi autem, qui scientia harum disciplinarum nondum sunt imbuti, raro eiusmodi regulis, quod ego quidem experientia edoctus affirmare possum, proprio Marte recte vti discunt. Scr. in Academia Vitebergenſi d. 5. Apr. A. N. C. 1790.

IO. IAC. EBERT.

INTRO-

INTRODVCTIO.

DE

VSV HARVM TABVLARVM.

Cum Tabulae sequentes tironibus potissimum destinatae sint, qui non semper iis rite vti dedicerunt, facere non possumus, quin pauca de earum indole atque vsu praemittamus. Ac primo quidem, antequam de Tabulis ipsis agamus, communicanda videntur cum lectoribus, quae in superioribus editionibus de natura et constructione Logarithmorum traduntur.

Logarithmi sunt numeri ad libitum assumiti, qui respondentes numeris geometrice proportionalibus, aequalem semper retinent differentiam. Si igitur numeris, in ratione geometrica progredientibus, subscribantur totidem alii, qui arithmeticam proportionem seruant, erunt hi illorum Logarithmi.

INTRODVCTIO.

N. pr.	Logarithmi.		
1	1	3	0
2	2	5	10
4	3	7	20
8	4	9	30
16	5	11	40
32	6	13	50
64	7	15	60
128	8	17	70
256	9	19	80
512	10	21	90
1024	11	23	100
2048	12	25	110
4096	13	27	120
8192	14	29	130

Patet hoc ex adiuncta Tabula, in cuius prima columna numeri geometrice proportionales exhibentur; in secunda autem et reliquis columnis habes Logarithmos eorundem proportionalium ad libitum assumtos: licet enim pro primo Logarithmo, et pro differentia reliquorum Logarithmorum progressiva, numerum quemcunque eligere. Definitis autem duorum numerorum Logarithmis, non amplius liberum est, alios Logarithmos assumere. Si v. g. ponas, Logarithmum unitatis esse 1 et binarii 2, Logarithmus quaternarii necessario erit 3, et octonarii 4. Quodsi autem Logarithmus unitatis fuerit 3 et binarii 5, necessario Logarithmus quaternarii erit 7, octonarii 9 &c.

Quia vero in proportione arithmeticâ summa terminorum extremorum aequalis est summae terminorum mediorum, facile intelligi potest, *datis quatuor numeris proportionalibus inter se, Logarithmos primi et quarti numeri simul sumtos aequales esse Logarithmis numerorum mediorum simul sumtis.*

Si fuerint igitur a, b, c, d numeri geometrice proportionales, erit $\text{Log. } a + \text{Log. } d = \text{Log. } b + \text{Log. } c$. Aut si $2 : 8 = 16 : 64$, Summa Logarithmi 2 et Logarithmi 64 aequalis erit summae Logarithmorum 8 et 16

Hinc fit, vt omissa Regula aurea, quae datis tribus numeris quartum proportionalem multiplicacione et diuisione inuenire docet, mathematici in calculis potissimum ad Trigonometriam et Astronomiam pertinentibus, Logarithmis numerorum datorum videntur. Ut enim Logarithmus numeri quarti proportionalis habeatur, non nisi additione et subtractione opus est. Nam si Logarithmi secundi et tertii numeri addantur, et ex eorum summa Logarithmus primi numeri detrahatur, reliquus erit quae siti quarti numeri Logarithmus, cuius ope quartum numerum ipsum in Tabulis reperies.

Quare sat erit, vt mox docebimus, Logarithmorum Tabulas construere, singulis numeris respondentium. Ita autem iis respondere debent, vt ab unitate progredientes nullum intermittent numerum, quod in progressionе supra proposita fit, 1, 2, 4, 8, 16 &c. in qua multi numeri, nempe, 3, 5, 6, 7, 9, 10, 11 &c. desiderantur, quibus tamen sui Logarithmi assignari debent.

Ad maiorem autem facilitatem positus est unitatis Logarithmus = 0, Logarithm. numeri 10 = 1.0000000 et Log. numeri 100 = 2.0000000 et sic porro, ut adiecta tabula monstrat. Vbi tamen notabis, primam Logarithmi figuram, quae *Characteristica* nuncupatur, semper esse unitate minorem, quam figuram, ex

Num. prop.	Logar.
1	0.0000000
10	1.0000000
100	2.0000000
1000	3.0000000
10000	4.0000000
100000	5.0000000
1000000	6.0000000
10000000	7.0000000
100000000	8.0000000
1000000000	9.0000000

quibus numerus, Logarithmo respondens, constat. Si v. g. numerus octo figuris constet, prima Logarithmi figura erit 7; erit vero Logarithmi Characteristica 8, si numerus nouem figuris constet.

Ex quibus principiis et fundamentis deducti sunt omnium numerorum integrorum Logarithmi, etiam illorum, qui ab 1 ad 10, a 10 ad 100, a 100 ad 1000 &c. procedunt, quorum Tabulae conditae sunt ea arte, ut sine multiplicatione et diuisione, sola additione et subtractione Logarithmorum, tribus numeris propositis respondentium habeatur Logarithmus quarti requisiti, eius ad latus in columnam numerorum naturalium postea reperiendi. Sunt autem, ut ex proposita Tabula manifestum est, Logarithmi numerorum ab 1 ad 10 unitate minores, h. e. fractiones verae, et omnium reliquorum numerorum, qui non in progressionem geometricam 1, 10, 100, 1000 &c. continentur, numeri mixti, h. e. ex numeris integris et fractis compositi. Sic v. g. $\text{Log. } 567 = 2.7535831$ constat ex numero integro 2, quem Characteristica denotat, et fractione decimali $\frac{7535831}{10000000}$. Cum autem in hoc systemate logarithmico Logarithmus unitatis sit 0, et omnes fractiones verae unitate minores sint, facile appareat, Logarithmos omnium fractionum verarum nihilo minores h. e. negatiuos esse. Sic v. g. $\text{Logarithm. } \frac{1}{10} = -1$, $\text{Log. } \frac{1}{100} = -2$, $\text{Log. } \frac{1}{1000} = -3$, $\text{Log. } \frac{1}{10000} = -4$ &c. Sed veniamus nunc ad Tabulas ipsas, quarum

Prima continet Sinus, Tangentes, et Secantes cuiusuis gradus et scrupuli Quadrantis, cuius semidia-

meter est 10000000 partium, nec non Logarithmos Sinuum et Tangentium, omissis Secantium Logarithmis, quia omnes fere calculi trigonometrici sine illis perfici possunt, et quia, si opus iis est, non magnam difficultatem habet earum inuentio, quippe quae his tantum duabus regulis nititur:

- 1) Logarithmus Sinus totius multiplicetur per 2.
- 2) Ab hoc Sinus totius duplo subtrahatur Logarithmus Cosinus eius anguli, de cuius Secantis Logarithmo quaestio est. Residuum erit Logarithmus Secantis quaesitus.

SCHEMA CALCULI.

Sit inueniendus Logarithmus Secantis anguli $14^\circ, 30'$

$$\begin{array}{rcl}
 \text{Logarithm. Sin. Tot.} & = & 10.000000 \\
 \hline
 \text{Eius duplum} & = & 20.000000 \\
 \text{Log. Cosin. } 14^\circ, 30' & = & 9.9859416 \\
 \hline
 \text{Ergo Log. Sec. } 14^\circ, 30' & = & 10.0140584
 \end{array}$$

In secunda Tabula reperiuntur Logarithmi Sinuum et Tangentium pro singulis Minutis secundis primi Gradus. Quoniam autem breuitatis caussa prætermissti sunt Logarithmi Cosinuum et Cotangentium, quibus tamen in computationibus astronomicis carere non possumus, docendum hic est, qua ratione tirones

Logarithmos Cosinuum et Cotangentium angulorum,
qui nondum vnum gradum compleent, inuenire possint.

- 1) Quaeratur angulus complementi, subtrahendo scilicet angulo dato ab angulo recto.
- 2) Subtrahatur angulus proxime minor non tantum ab angulo proxime maiore, in Canone obuio, sed etiam ab angulo complementi quaesito.
- 3) Subtrahatur porro Logarithmus Sinus, (si Logarithmus Cosinus inueniendus sit), aut Logarithmus Tangentis (si sermo fuerit de Logarithmo Cotangentis) anguli proxime minoris a Logarithmo Sinus (aut Tangentis) anguli proxime maioris.
- 4) Inferatur nunc: vt differentia anguli proxime majoris et proxime minoris ad differentiam anguli minoris et anguli complementi, ita differentia Logarithmorum Sinus (aut Tangentis) anguli minoris et Sinus (aut Tangentis) anguli maioris ad differentiam Logarithmorum Sinus (aut Tangentis) anguli proxime minoris et Sinus (aut Tangentis) anguli complementi.
- 5) Addatur haec differentia Logarithmo Sinus (aut Tangentis) anguli proxime minoris, Summa erit Logarithmus quaesitus.

SCHEMA OPERATIONIS.

Quaeratur e. gr. Logarithmus Cosinus anguli
59° 40".

Erit

Erit igitur Ang. compl. = $90^\circ - 59'$, $40'' = 89^\circ, 0', 20''$

Angulus proxime maior = $89^\circ, 1'$

Angul. proxime minor = $89^\circ, 0'$

Different. = $0^\circ, 1' = 60''$

Angulus complem. = $89^\circ, 0', 20''$

Angul. proxime minor = $89^\circ, 0', 0''$

Different. = $0^\circ, 0', 20''$

Log. Sin. $89^\circ, 1' = 9,9999360$

Log. Sin. $89^\circ, 0' = 9,9999338$

Different. = 22

Ergo $60'' : 20'' = 22 : x$

$$\text{atque } x = \frac{20 \times 22}{60} = 7\frac{1}{3}$$

quae autem fractio $\frac{1}{3}$ omitti potest.

Quia igitur hoc loco $x=7$ denotat differentiam Logarithrorum Sinus anguli proxime minoris et Sinus anguli complementi, addendus nunc est numerus 7 Logarithmo sinus $89^\circ, 0'$.

Log. Sin. $89^\circ, 0' = 9,9999338$

differ. $x = 7$

Ergo Log. Cof. $59', 40'' = 9,9999345$

Simili ratione etiam Logarithmi Cotangentium, in his Tabulis non obuii, inueniri possunt.

In *tertia* Tabula sunt Logarithmi numerorum naturali serie ab 1 ad 10000 crescentium. Quia autem saepe opus est Logarithmis plurium numerorum,

modum monstrabo, quo Logarithmus cuiuscunque numeri, sed 1000000 non excedentis, inueniri posset, et contra

- 1) Quaere in Tabula Logarithmum quatuor primorum figurarum numeri dati.
- 2) Subtrahe Logarithmum inventum ex Logarithmo proxime sequenti in Tabula, vt habeas eorum differentiam,
- 3) Duc inuentam differentiam in reliquas figuras numeri dati, et ex producto abscinde ad dextram tot figuras, quot reliquae fuerint.
- 4) Reliquum producti adde Logarithmo primum invento; summa erit Logarithmus quæsitus, si primam figuram mutaueris, quæ semper, vt supra monuimus, debet esse i minor numero figurarum, quibus numerus integer datus consistit.

SCHEMA CALVLI.

Quaeratur Logarithmus numeri 3567894.

Quatuor primæ figuræ huius numeri sunt 3567

$$\text{Log. proxime sequ. } 3568 = 3.5524248$$

$$\text{Log. } 3567 = 3.5523031$$

Differentia =	1217
---------------	------

Tres reliquæ fig. numeri dati =	894
---------------------------------	-----

4868

10953

9736

Productum =	1087998
-------------	---------

Ex

Ex quo si tres figurae a dextra ad sinistram abscindantur, relinquitur numerus 1087, addendus

Logarithmo 3567 = 3.5523031

3.5524118

Quoniam autem numerus datus 3567894 septem figuris constat, mutanda est Characteristica 3 huius Logarithmi in 6, quo facto erit

6.5524118 = Log. 3567894

Aliter

- 1) Resecentur quatuor notae aut figurae ad sinistram numeri dati, et ex Tabula excerptantur earum Logarithmus, et Logarithmus proxime sequens.
- 2) Characteristicae tot addantur vnitates, quot notae ad dextram residuae.
- 3) Logarithmus prior subtrahatur a Logarithmo proxime sequente.
- 4) Inferatur: ut differentia numerorum ad differentiam tabularem Logarithmorum ipsis respondentium, ita notae residuae numeri dati ad differentiam logarithmicam inueniendam. Quae si
- 5) Addatur Logarithmo per N. 1 et 2 inuento, summa erit Logarithmus quaesitus.

SCHEMA CALCULI.

Quaeratur iterum Logarithmus Numeri 3567894

Reseca igitur quatuor notas primas 3567, et quaere huius numeri Logarithmuin. Est autem

INTRODVCTIO.

$$\text{Log. } 3567 = 3.5523031$$

$$\text{Ergo Log. } 3567000 = 6.5523031$$

$$\text{Log. } 3568 = 3.5524248$$

$$\text{Ergo Log. } 3568000 = 6.5524248$$

$$\text{Et quia } 3568000 - 3567000 = 1000$$

$$\text{Notae residuae aut } 3567894 - 3567000 = 894$$

$$\text{et } 6.5524248 - 6.5523031 = 1217$$

Erit igitur 1000 ad 1217 vt 894 ad differ. log.

$$\text{Ergo differ. log.} = \frac{1217 \times 894}{1000} = 1087$$

Iam Logarithmo 6.5523031
addatur differ. log. 1087

Summa est Log. quæsitus 6.5524118

Simili ratione inueniuntur Logarithmi aliorum numerorum, in Tabulis non obuiorum, v. g. numeri 3567894, cuius Logarithmus est 6.5524118.

NOTA.

Si datur numerus 3.567894 = $3\frac{567894}{1000000}$, vel $356\frac{7894}{100000}$, vel 356.7894 &c. Logarithini eorum iidem sunt, qui numeri integri 3567894, excepta tantum Characteristica aut prima figura, et modus eos inueniendi prorsus est idem. Nempe quia

$$\text{Log. } 3567894 = 6.5524118$$

$$\text{Erit Log. } 3.567894 = 0.5524118$$

$$\text{Log. } 35.67894 = 1.5524118$$

$$\text{Log. } 356.7894 = 2.5524118$$

$$\text{Log. } 3567.894 = 3.5524118 \text{ &c.}$$

Et

Et si datur numerus integer cum fractione decimali adiuncta, non habens plus quatuor figuris, Logarithmus eius in Tabula ipsa inuenietur. Si v. g. inueniendi sint Logarithmi numerorum $3\frac{567}{1000}$, $35\frac{67}{100}$ et $356\frac{7}{10}$, quaeratur in Tabula Logarithmus numeri 3567, atque ex prima figura s. Characteristica Logarithmi detrahantur tot unitates, quot notas habet numerator fractionis. Quia igitur

$$\text{Log. } 3567 = 3.5523031$$

$$\text{Erit Log. } 3\frac{567}{1000} = 0.5523031$$

$$\text{Log. } 35\frac{67}{100} = 1.5523031$$

$$\text{et Log. } 356\frac{7}{10} = 2.5523031$$

Vnde apparet, fractiones decimales in usu Logarithmorum magnam praebere facilitatem, ideoque aliis esse anteponendas. Nam si alia species fractionis numero integro fuerit adiuncta, v. g. $3\frac{3}{4}$, mutandus est numerus mixtus in fractionem spuriam, et deinde Logarithmus denominatoris e Logarithmo numeratoris subtrahendus, vt inueniatur Logarithmus numeri mixti. Sic $3\frac{3}{4}$ mutatis in $\frac{15}{4}$ erit

$$\text{Log. } 3\frac{3}{4} = \text{Log. } \frac{15}{4} = \text{Log. } 15 - \text{Log. } 4.$$

$$\text{Est autem Log. } 15 = 1.1760913$$

$$\text{et Log. } 4 = 0.6020600$$

$$\text{Ergo Log. } 3\frac{3}{4} = 0.5740313$$

Eadem ratione etiam Logarithmus fractionis verae inueniri potest, nempe detrahendo Logarithmo denominatoris e Logarithmo numeratoris. Quoniam

autem

autem fractionis verae numerator minor est denominatore, subtractione ita fieri solet, ut Logarithmus numeratoris ex Logarithmo denominatoris detrahatur et differentiae signum —, quod *minus* significat, praeponatur. Sic v. g. Log. $\frac{2}{3}$ hac ratione inueniri potest:

$$\begin{array}{r} \text{Log. } 3 = 0.4771212 \\ \text{et Log. } 2 = 0.3010300 \\ \hline \end{array}$$

$$\text{Ergo Log. } \frac{2}{3} = -0.1760912$$

Restat, ut doceamus, quomodo *numerus dati Logarithmi, in Tabulis non obuii, inueniri possit.*

Cum autem Characteristica datorum Logarithmorum sit vel 3, vel minor, vel maior, quam 3, triplex erit resolutio huius problematis.

CASVS I. *Si Characteristica dati Logarithmi fuerit 3, h. e. si numerus, cui conuenit Logarithmus, inter 1000 et 10000 cadat*

- 1) Subtrahatur Logarithmus proxime minor non tantum a Logarithmo proxime maiore in Tabulis obuio, sed etiam a Logarithmo dato.
- 2) Inferatur: ut differentia prior ad differentiam posteriorem, ita particulae decimales, aut centesimae, aut millesimae &c. ad particulias homogeneas decimales, aut centesimas, aut millesimas &c. inueniendas.
- 3) Particulae istae inuentae addantur numero, qui Logarithmo proxime minori in Tabulis respondet,

det, summa erit numerus dato Logarithmo respondens.

SCHEMA CALCULI.

Quaeratur numerus Logarithmo 3.7589982 respondens.

$$\text{Log. proxime maior } 3.7590632 = \text{Log. } 5742$$

$$\text{Log. proxime minor } 3.7589875 = \text{Log. } 5741$$

$$\text{Differentia} = 757 \quad \text{Diff.} = 1$$

$$\text{Logarithmus datus } 3.7589982$$

$$\text{Logarithmus pr. minor } 3.7589875$$

$$\text{Differentia} = 107$$

$$\text{Ergo } 757 : 107 = 1 : \frac{y}{1000}$$

$$\text{aut } 757 : 107 = 1000 : y$$

$$y = \frac{107 \times 1000}{757} = 141$$

$$\text{atque } \frac{y}{1000} = \frac{141}{1000}$$

$$\text{Add. num. Log. min. } = 5741$$

$$\text{Erit numerus quaesitus } 5741\frac{141}{1000}$$

CASUS II. Si Characteristica dati Logarithmi minor fuerit quam 3, h. e. aut 0, aut 1, aut 2.

1) Augeatur Characteristica, vt fiat 3.

2) Quaeratur nunc Logarithmus in Tabula inter Logarithmos numerorum 1000 — 10000. Numerus enim respondens inveni Logarithmo erit

INTRODVCTIO.

quaesitus, tot fractiones decimales adiectas numerans, quot vnitates accesserunt Characteristicae.

Si e. gr. inueniendus sit numerus Logarithmo 0.6542713 respondens, mutetur Characteristica 0 in 3, vt fiat

$$\frac{3.6542713}{\text{Ergo } 0.6542713} = \text{Log. } 4511$$

$$\text{Ergo } 0.6542713 = \text{Log. } 4.511$$

¶ Quodsi vero fractiones hoc modo inuentae Problemati nondum satisficerint, per regulas Cas. I. minores partes adhuc reperientur.

CASVS III. Si Characteristica dati Logarithmi fuerit maior, quam 3

- 1) Quaeratur, neglecta Characteristica, Logarithmus dato respondens pro quatuor primis notis numeri quaesiti.
- 2) Subtrahatur Logarithmus inuentus ex Logarithmo dato, et residuo addantur tot cyphrae, quot figuræ ultra quatuor inuentas quaeruntur.
- 3) Diuidatur residuum sic augmentatum per differentiam Logarithmi inuenti et proxime sequentis, et Quotus scribatur post quatuor notas inuentas. Tum respiciatur Characteristica Logarithmi dati, quae ostendet numerum integrum et fractionem numeri quaesiti.
Quaeratur e.g. numerus Logarithmo 4.5524118 respondens.

Logarithmus, qui in Tabula inuenitur, neglecta Characteristica, dato proxime minor, est 3.5523031, respondens numero 3567, qui continet primas quatuor figuras numeri quaesiti. Logarithmo hoc subtraheto ex dato relinquitur 1087, qui numerus auctus 3 cyphris, fit 1087000, et si per 1217, differentiam Logarithmi inuenti et proxime sequentis, diuidatur, Quotus erit 894, qui post 3567 positus dabit numerum 3567894. Quia autem Characteristica dati Logarithmi est 4, numerus quaesitus erit $35678\frac{94}{100}$.

Tabula *quarta* continet Quadrata et Cubos, *quinta* autem et ultima Radices quadratas et cubicas numerorum naturali serie progredientium ab 1 ad 1000. Si enim maioribus numeris Radix extrahenda sit, his Tabulis saltem ad minuendum laborem uti possumus.

Sit e. g. Radix quadrata e numero 92948881 extrahenda.

- 1) Distinguatur datus numerus in classes, binas notas unicuique classi assignando, initio a dextra facto.
- 2) Quaeratur in Tabula numerus quadratus notis, quae priores tres classes occupant, (929488) vel aequalis, aut, si aequalis non inueniatur, eodem proxime minor, et subtrahatur a numero dato numerus inuentus (929296), cuius Radix (964) tres priores partes Radicis quaesitae continent.

3) Quodsi operatio iuxta regulas satis notas continueatur, prodibit Radix quaesita.

SCHEMA CALCULI.

$$\begin{array}{r}
 \text{Num. qu. pr. min.} \quad 9^2 \quad | \quad 9^4 \quad | \quad 8^8 \quad | \quad 8^1 \quad | \quad 9^6 4^1 \\
 \hline
 9^2 \quad | \quad 9^2 \quad | \quad 9^6 \quad | \quad \\
 1 | 9^2 \quad | \quad 8^1 \\
 (1 \ 9^2 \ 8) \quad 1 \\
 1 \ 9^2 \quad 8^1 \\
 \hline
 \end{array}$$

○

Si Radix cubica e numero dato v. gr. e numero 85481557656 extrahenda sit, tres notae vnicuique classi assignandae sunt, quod nemini obscurum esse potest, qui in scientia numerorum non plane hospes est.

SCHEMA CALCULI.
